

## AUG-09 GROUP 4 EXERCISES

### DETERMINANT

**Excercise 0.1.** We want to deduce the formula for the determinant

$$\det \begin{bmatrix} a & b \\ c & d \end{bmatrix} = ad - bc.$$

It turns out that

$$\left| \det \begin{bmatrix} a & b \\ c & d \end{bmatrix} \right| = \text{Area of the quadrilateral PQRS}$$

where

$$\begin{aligned} P &= (0, 0), \\ Q &= (a, c), \\ R &= (b, d), \\ S &= (a + b, c + d). \end{aligned}$$

Show the following for all real  $a, b, c, d$ .

- (1) Argue geometrically that

$$\left| \det \begin{bmatrix} a & 0 \\ 0 & d \end{bmatrix} \right| = |ad|.$$

- (2) Argue geometrically that

$$\left| \det \begin{bmatrix} 0 & b \\ c & 0 \end{bmatrix} \right| = |bc|.$$

- (3) Argue geometrically that

$$\left| \det \begin{bmatrix} a & 0 \\ c & d \end{bmatrix} \right| = \left| \det \begin{bmatrix} a & 0 \\ 0 & d \end{bmatrix} \right|.$$

[Hint: Draw two quadrilaterals, what do you notice?]

- (4) Argue geometrically that

$$\left| \det \begin{bmatrix} 0 & b \\ c & d \end{bmatrix} \right| = \left| \det \begin{bmatrix} 0 & b \\ c & 0 \end{bmatrix} \right|.$$

- (5) Argue geometrically that

$$\left| \det \begin{bmatrix} a+b & b \\ c+d & d \end{bmatrix} \right| = \left| \det \begin{bmatrix} a & b \\ c & d \end{bmatrix} \right|.$$

[Hint: Draw two quadrilaterals]

- (6) For any  $\lambda \in \mathbb{R}$ , argue geometrically that

$$\left| \det \begin{bmatrix} a+\lambda b & b \\ c+\lambda d & d \end{bmatrix} \right| = \left| \det \begin{bmatrix} a & b \\ c & d \end{bmatrix} \right|.$$

[Hint: Adapt the argument from (5)]

(7) Show that

$$\left| \det \begin{bmatrix} a & b \\ c & d \end{bmatrix} \right| = |ad - bc|.$$

[Hint: Choose a suitable  $\lambda$ ]

(8) Argue why

$$\left| \det \begin{bmatrix} a & b \\ c & d \end{bmatrix} \right| = \left| \det \begin{bmatrix} b & a \\ d & c \end{bmatrix} \right|$$

without using the formula.
